The diagram illustrates the logic function of the 74VHC04 inverter. It shows two input signals, O1 and O2, and one output signal, O3. O1 and O2 are square waves. O3 is the inverted output of O1 and O2. The diagram shows that O3 is high when both O1 and O2 are low, and low when either O1 or O2 is high.

BYE

P1

BYE

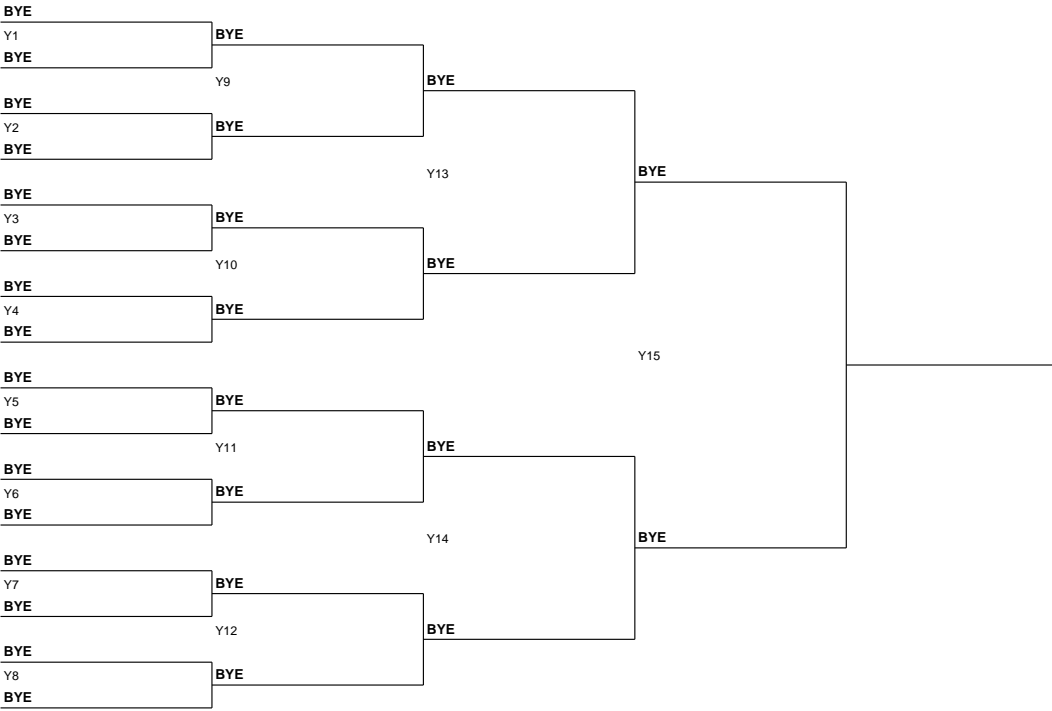

The diagram illustrates a hierarchical flowchart structure. It begins with a series of nodes on the left, each labeled 'BYE' and 'Q' followed by a number. These nodes are connected by lines and boxes, forming a complex network of paths. The flow generally moves from left to right, with nodes branching out and then converging back into a single path on the right side. The nodes are organized into several levels, with the final level on the right being a single path of nodes labeled 'BYE' and 'Q' followed by a number.
